

CycloneBOOT

CycloneBOOT is an embedded secure TCP/IP bootloader targeting microcontrollers.

Main Features

- Client or server operation
- In Application Programming (IAP) supported for client bootloader

Supported Protocols

- TFTP
- FTP / FTPS
- HTTP / HTTPS

Coming soon: SFTP

Supported Processors

- STM32L4
- STM32F4
- STM32F7
- STM32H7

Supported Compilers / Toolchains

- GNU GCC / Makefile
- Atollic TrueSTUDIO
- IAR Embedded Workbench
- Keil MDK-ARM
- SEGGER Embedded Studio
- AC6 System Workbench for STM32 (SW4STM32)
- ST STM32CubeIDE
